Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1921 Excerpt: .in 0, and take  $OA = OA = a$ . Then A and A are points on the curve. Why? Now between F and F take any point K. With F as center and AK as radius, describe arcs; with F as center and A K as radius, describe arcs intersecting the former in P and P . By interchanging radii, Q and Q are found. These all lie on the curve because the sum of the focal distances of each is 2 a. After finding enough points we join them by a smooth curve. (2) Mechanically. Fix pins at F and F and join them by a string of length 2 a. A pencil point P moved so as to keep the string stretched will trace the ellipse; for in all positions of P, we have  $PF + PF = 2 a$ . i-l. yy -1 a2 62 is the required equation. The normal is  $(y--Vi) = j (x--xi)$  The subtangent and subnormal are found by putting  $y = 0$  in equations of the tangent and normal; viz., subtangent  $=--x$ , b2 subnormal  $=--x$ , as Note.- -That the subtangent is a function of the abscissa and a. 128. Equation of tangent in terms of slope.--The abscissas of the points of intersection of the line  $y = mx + o (1)$  with  $S+i=i$  are determined by the equation  $a;2 (mx + cf 1, . + p 1 (3) 3$ . The tangent and normal to the ellipse at the end of...
