Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1836 Excerpt: .vitreous, or glassy. The crystalline humor, has the shape of a double convex lens, and occupies the front part of the eye, being situated between the aqueous and vitreous humors. The aqueous humor a, is a transparent, watery fluid which occupies the most prominent portion of the organ, immediately within the cornea. In this humor is situated the iris, i, a thin, circular membrane, which is of various colors in different persons, being black, in the black, and blue, in the blue eyed. On this account, this part is called iris, i, which means rainbow. Through the iris there is a central perforation, called the pupil, p, through which the light, or the images of objects pass to the retina. The iris is fixed to the choroid coat by a white elastic ring, called the ciliary ligament, g. The interior surface of the iris is lined with a dark brown pigment called the uvea. Structure of the Iris.--The structure of the Iris is very peculiar, being composed of two layers of con What is the situation of the sclerotic coat 1 What is the choroid coat 1 What is the situation of the cornea 1 Where is the vitreous humor situated 1 What is the shape and situation of the crystalline lens 1 What is the iris 1 What forms the pupil of the eye 7 Fig. JOT. tractile fibres, Fig. 100. One of these layers form concentric circles, the other being disposed in the form...
