## THE COLORADO ENGINEER VOLUME 1

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: .center of gravity. Now construct a force polygon as in (c) and an equilibrium polygon as in (b) Fig. i. Now, in (b) the tangent of the angle between any side of the equilibrium polygon and the axis of  $X$  is  $\tan \alpha = \frac{d^2y}{dx^2}$ . If the string  $dx$  in (b) is produced until it cuts the vertical line through 3, it will cut off the intercept 3-31, which is the difference between two consecutive values of  $dy$  and therefore equals  $d^2y$ . Now, it has been proved that the moment of the force acting through point 2 in (b) about point 3, is equal to the intercept 3-31 multiplied by the pole distance  $H$ , is equal to  $3-31 \times H = d^2yH$ . But the moment of the differential load  $f_x dx$ , which acts through point 2, about point 3, is  $f_x dx$ , and  $f_x dx^2 = d^2yH$ , and  $d^2y f_x dx^2 = H$  (1) It is evident that (1) is the differential equation of the equilibrium polygon in (b). Now, if the loading is taken so that  $y = f_x = M$ , where  $M$  represents the bending moment at any given point  $x$ , due to a given loading, the equation for the equilibrium polygon becomes  $d^2y M dx^2 = H$  (2) From mechanics we have the relation that  $d^2y M dx^2 = \frac{EI}{H}$  (3) which differs from (2) only in having  $EI$  substituted for  $H$ ,  $E$  being the modulus of elasticity and  $I$  the moment of inertia of the...
